THE HIGH COST OF ADVERSE CHILDHOOD EXPERIENCES
BRAIN RESEARCH

EPIDEMIOLOGICAL RESEARCH

For a full list of publications, see http://www.cdc.gov/nccdphp/ace/publications.htm

RESILIENCY RESEARCH

Today’s workshop will:
Present emerging research so new & powerful that, when understood, it transforms mental models

*So that*
You create transformative conversations

*So that*
Leaders throughout the state act most effectively to support thriving families
To ensure the best match between the individual & the conditions he/she will face, the brain adapts to experience. Adaptation is fundamental to the brain’s design.
ADVERSE CHILDHOOD EXPERIENCE

EXPERIENCE DRIVES DEVELOPMENT

- Determines function & specialty of cells exposed to certain hormones.
- Activate systems prematurely & makes them more sensitive to future stressors.
- Regulates myelination—the coating of nerves with fat.
- Regulates the development of receptor cells—the decoder rings of the brain.
- Determines how brain cells network with each other, shaping mass & function of the brain at maturity.
- Stress-related chemicals kill off baby brain cells.

= DNA
BRAIN DEVELOPMENT PATTERNS
Adapted from the research of Martin Teicher, MD, Ph.D

**Neural Start**
- **Brain**: Hormones, chemicals & cellular systems prepare for a tough life in an evil world
- **Outcome**: Individual & species survive the worst conditions.

**Traumatic Stress**
- **Brain**: Hormones, chemicals & cellular systems prepare for life in a benevolent world
- **Individual**: Edgy, hot temper, impulsive, hyper vigilant, “Brawn over brains”
- **Outcome**: Individual & species live peacefully in good times; vulnerable in poor conditions.

Dissonance between biological expectations & social reality fuels psychiatric disorders.
DISCUSSION

→ In your experience, how do our major social services, health, justice, education and/or mental health systems respond to young people who act on “brawn over brains”?

→ How do these systems’ responses work for children and families?
CONSEQUENCES OF BIOLOGICAL OUTCOMES

COGNITIVE
• Slowed language development
• Attention problems (ADD/ADHD)
• Speech delay
• Poor verbal memory/recall
• Loss of brain matter/IQ

SOCIAL
• Aggression & violent outbursts
• Poor self-control of emotion
• Can’t modify behavior in response to social cues
• Social isolation—can’t navigate friendship

MENTAL HEALTH
• Poor social/emotional development
• Alcohol, tobacco & other drug abuse—vulnerable to early initiation
• Adolescent & adult mental health disorders—especially depression, suicide, dissociative disorder, borderline personality disorder, PTSD
HIPPOCAMPUS

The center for:
• Controlling emotional reactions
• Constructing verbal memory
• Constructing spatial memory

VULNERABLE TO:
All forms of maltreatment in the first 2-3 years of life.
CORPUS CALLOSUM

Integrates hemispheres & facilitates:

• Language development
• Proficiency in math
• Processing of social cues, such as facial expression

VULNERABLE TO:

Neglect in infancy.

Sexual abuse in the elementary school years.
SUPERIOR TEMPORAL GYRUS
Center for spoken language.

VULNERABLE TO:
Emotional abuse, especially between ages 7 and 9.
CEREBELLAR VERMIS

Center for:
• Regulating mental health
• Regulating movement through the physical environment
• Reacting to peripheral details in the world around us

VULNERABLE TO:
High levels of cortisol prior to puberty.
CORTEX

Center for:
• Thinking & judgment
• Executive function
• Long term memory
• Vision

VULNERABLE TO:
Trauma in the first several years of life affecting pre-frontal cortex.

Witnessing domestic violence in the elementary school years affecting visual cortex.

Sexual abuse at 15-16 affecting executive function.
DISCUSSION

→ In what ways does the finding that trauma is woven into our bodies and cells challenge your mental models about biology? Behavior? Psychology?

→ Collectively, how might we deal with the challenges to our mental models that come with this new science?
ADVERSE CHILDHOOD EXPERIENCES
STUDY
WHAT ARE THE ADVERSE CHILDHOOD EXPERIENCES (ACEs)?

1. Child physical abuse
2. Child sexual abuse
3. Child emotional abuse
4. Neglect
5. Mentally ill, depressed or suicidal person in the home
6. Drug addicted or alcoholic family member
7. Witnessing domestic violence against the mother
8. Loss of a parent to death or abandonment, including abandonment by divorce
9. Incarceration of any family member
A CLASSIC CAUSAL RELATIONSHIP
MORE ACEs = MORE HEALTH PROBLEMS

Dose-response is a direct measure of cause & effect.
The “response”—in this case the occurrence of the health condition—is caused directly by the size of the “dose”—in this case, the number of ACEs.
LIFE LONG PHYSICAL, MENTAL & BEHAVIORAL OUTCOMES OF ACEs

→ Alcoholism & alcohol abuse
→ Chronic obstructive pulmonary disease & ischemic heart disease
→ Depression
→ Fetal death
→ High risk sexual activity
→ Illicit drug use
→ Intimate partner violence
→ Liver disease
→ Obesity
→ Sexually transmitted disease
→ Smoking
→ Suicide attempts
→ Unintended pregnancy

The higher the ACE Score, the greater the incidence of co-occurring conditions from this list.

ACE STUDY DOSE RESPONSE FINDINGS

**Intravenous Drug Use**

- ACE Score 1: 1
- ACE Score 2: 2
- ACE Score 3: 3
- ACE Score 4: 4

**Attempted Suicide**

- ACE Score 1: 1
- ACE Score 2: 2
- ACE Score 3: 3
- ACE Score 4: 4

% Reporting IV Drug Use

% Ever Attempting Suicide
PROBABILITY OF SAMPLE OUTCOMES GIVEN 100 AMERICAN ADULTS

33 Report No ACEs
WITH 0 ACEs
1 in 16 smokes
1 in 69 are alcoholic
1 in 480 uses IV drugs
1 in 14 has heart disease
1 in 96 attempts suicide

51 Report 1-3 ACES
WITH 3 ACEs
1 in 9 smokes
1 in 9 are alcoholic
1 in 43 uses IV drugs
1 in 7 has heart disease
1 in 10 attempts suicide

16 Report 4-8 ACEs
WITH 7+ ACEs
1 in 6 smokes
1 in 6 are alcoholic
1 in 30 use IV drugs
1 in 6 has heart disease
1 in 5 attempts suicide
DISCUSSION

→ In what ways does this study affirm or challenge your life experience and/or professional understanding of mental, behavioral & physical health outcomes?
ACE DATA IN CONTEXT & ACTION:

*Pierce County Juvenile Court Improvement Project*
PREVALENCE of ACEs
COURT INVOLVED YOUTH vs. ADULTS IN ACE STUDY

- 0-1 ACEs:
  - Juveniles: 17%
  - Adults: 58%

- 2-3 ACEs:
  - Juveniles: 25%
  - Adults: 50%

- 4+ ACEs:
  - Juveniles: 33%
  - Adults: 16%
DISTRIBUTION OF ACEs AMONG JUVENILE OFFENDERS IN PIERCE COUNTY, WASHINGTON

- **17 OFFENDERS**
  - Report 0-1 ACEs
  - OFFENDERS WITH 1 ACE REPORT:
    - Loss of a parent

- **50 OFFENDERS**
  - Report 2-3 ACES
  - OFFENDERS WITH 3 ACEs REPORT:
    - Loss of a parent
    - Incarcerated family member
    - Threats/intimidation (Emotional abuse)

- **33 OFFENDERS**
  - Report 4+ ACEs
  - OFFENDERS WITH 5 ACEs REPORT:
    - Loss of a parent
    - Threats/intimidation
    - Incarcerated family member
    - Substance abuse in the home
    - Physically Abused
JUVENILE OFFENDERS: ACES & SCHOOL EXPERIENCE

4+ Suspensions
- 0-1 ACEs: 43%
- 2-3 ACEs: 61%
- 4+ ACEs: 64%

Early Suspension
- 0-1 ACEs: 71%
- 2-3 ACEs: 82%
- 4+ ACEs: 85%

FELONY RE-OFFENSE BY ACE CATEGORY (Males)

- 0-1 ACEs: 11% 1 Yr Re-offense, 13% 2 Yr Re-offense
- 2-3 ACEs: 18% 1 Yr Re-offense, 29% 2 Yr Re-offense
- 4+ ACEs: 20% 1 Yr Re-offense, 33% 2 Yr Re-offense

Legend: Green = 1 Yr Re-offense, Blue = 2 Yr Re-offense
DISCUSSION

→ In what ways does the complexity of this data—of the cases that the data represents—raise leadership questions for you?
Significant risk of early use/abuse of:
- Alcohol, tobacco, illicit & prescription drugs

- Slowed language & reading
- Lateralization
- Diminished IQ
- Poor decision making skills

- Attention problems
- ADD
- ADHD

- Aggressive behavior
- Social isolation among peers
- Poor understanding of social cues = conflict

- Special education
- School failure
- Dropping out

- Suspension
- Expulsion
- Delinquency
- Dropping out

- Low-wage jobs
- Unemployment
- Public Assistance
- Prison
- Chronic health problems
- Debilitating mental health
- Substance Abuse
OPPORTUNITIES FOR RESILIENCE
WHAT IS RESILIENCE?

“Resilience refers to a class of phenomena characterized by good outcomes in spite of serious threats to adaptation or development.”

-Ann Masten, *Ordinary Magic: Resilience Processes in Development*

“Resilience is the result not only of biologically given traits, but also of people’s embeddedness in complex and dynamic social contexts, contexts that are themselves more or less vulnerable to harm, more or less amenable to change, and apt focal points for intervention.”

-Mary Harvey, *Towards an Ecological Understanding of Resilience in Trauma Survivors*
RESILIENCE AS A DEVELOPMENTAL PROCESS

• We develop competencies & characteristics that prepare us to be effective in the world we’re growing into.

• We develop the capacity to adapt in the face of challenges.

• None of us is perfect—we’ll all have moments when we don’t appear to be very well adapted to the conditions we’re facing.

• Resilience is complex; it is possible to be resilient in one setting and pathological in another.
KEY COMPONENTS OF THE DEVELOPMENTAL PROCESS

Recent studies with diverse approaches point to a short list of global factors associated with resilience:

- Connections/attachment to competent & caring adults in the family & community
- Cognitive & self-regulation skills
- Positive view of self
- Motivation/ability to be effective in the environment
DISCUSSION

→ In what ways do the findings regarding resilience offer you hope or possibility for the future?
NEXT CONVERSATIONS:

NEXT STEPS
What do we value as a community?

What structures do we have in place to address adverse childhood experiences & the problems they cause?

How well do our structures reflect our values?
